## Types of ELBA Dryers

	Heat Pump Dryers	Condenser Dryers	Air Vented Dryers
Energy Efficient	✓✓✓	✓✓	✓
Air Vented	No	No	Yes
Installation	Ventilated Area	Ventilated Area	Near Window
Cost	\$\$\$	\$\$	\$
General Functions	<p>Air is heated and blown through damp laundry, it is cooled so it condenses back into water and drained off. The air is reheated again and the cycle continues.</p> <p>Dry gently at lower temperature, preserving the life of your laundry much longer compared to other dryers.</p>	<p>Uses heat exchanger to cool the warm air that has passed through your damp laundry and condense into water. The water is stored in a collection tank which has to be emptied when full.</p>	<p>Pump out the hot and damp air from your laundry during the drying process through a vent or a hose.</p>
